## Federal Communication Commission Interference Statement

This device complies with FCC Rules Part 15. Operation is subject to the following two conditions:

- This device may not cause harmful interference, and
- This device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the Federal Communications Commission (FCC) rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

---

**CAUTION!** You are cautioned that changes or modifications not expressly approved by the party responsible for compliance could void your authority to operate the equipment.

---

Reprinted from the Code of Federal Regulations #47, part 15.193, 1993. Washington DC: Office of the Federal Register, National Archives and Records Administration, U.S. Government Printing Office.

## Safety Statements

### Regulatory Information/Disclaimers

Installation and use of this Wireless LAN device must be in strict accordance with the instructions included in the user documentation provided with the product. Any changes or modifications (including the antennas) made to this device that are not expressly approved by the manufacturer may void the user's authority to operate the equipment. The manufacturer is not responsible for any radio or television interference caused by unauthorized modification of this device, or the substitution of the connecting cables and equipment other than manufacturer specified. It is the responsibility of the user to correct any interference caused by such unauthorized modification, substitution or attachment. Manufacturer and its authorized resellers or distributors will assume no liability for any damage or violation of government regulations arising from failing to comply with these guidelines.

### Safety Information

In order to maintain compliance with the FCC RF exposure guidelines, this equipment should be installed and operated with minimum distance [20cm] between the radiator and your body. Use only with supplied antenna.

Unauthorized antenna, modification, or attachments could damage the transmitter and may violate FCC regulations.

---

**CAUTION!** Any changes or modifications not expressly approved in this manual could void your authorization to use this device.

---

## **Caution Statement of the FCC Radio Frequency Exposure**

This Wireless LAN radio device has been evaluated under FCC Bulletin OET 65C and found compliant to the requirements as set forth in CFR 47 Sections 2.1091, 2.1093, and 15.247(b)(4) addressing RF Exposure from radio frequency devices. The radiation output power of this Wireless LAN device is far below the FCC radio frequency exposure limits. Nevertheless, this device shall be used in such a manner that the potential for human contact during normal operation – as a mobile or portable device but use in a body-worn way is strictly prohibit. When using this device, a certain separation distance between antenna and nearby persons has to be kept to ensure RF exposure compliance. In order to comply with the RF exposure limits established in the ANSI C95.1 standards, the distance between the antennas and the user should not be less than [20cm].

# 1. Introduction

Thank you for choosing the SparkLAN WCM-110 802.11g Wireless Ethernet Adapter! The WCM-110 is a pocket-size wireless client, access point, and universal repeater in one. Packed with features and latest in wireless technology, WCM-110 is sure to keep you ahead in the world of wireless computing!

## 1.1 Packet Content

Check the following items in your WCM-110 Adapter package. Contact your retailer if any item is damaged or missing.

- 802.11g Wireless Ethernet Adapter
- 2dBi detachable RSMA Antenna
- Quick Installation Guide
- User Manual CD-ROM
- Combo Cable for Power and Network
- AC Power Adapter, 5V/1A Output

Wireless Ethernet Client Adapter

External Dipole Antenna

Combo Cable for power and network

## 1.2 System requirements

Before installing the SparkLAN WCM-110 client adapter, make sure that your computer meets the following requirements:

- An Ethernet RJ-45 port (10Base-T/100Base-TX)
- At least one IEEE 802.11b/g device with wireless capability
- An installed TCP/IP and Internet browser

## 1.3 Hardware View

### 1.3.1 Front view

### 1.3.2 Side View

### 1.3.3 Back View

## 1.4 LED Definition

The WCM-110 comes with Link, Activity, and Power LED indicators. Refer to the table below for LED definitions:

LED	Color	Mode	Definition
Link	Red	On	The device is connected to an Ethernet network.
		Off	The device is off or there is no Ethernet connection.
Activity	Blue	On	The device is on and ready.
		Off	The device is off.
		Blinking	The device is transmitting or receiving data.
Power	Orange	On	The device is on and ready.
		Off	The device is off or performing boot sequence.
		Blinking	Firmware upgrade failed.

## 2. Device Installation

1. Connect the antenna with the WCM-110.
2. Plug the power connector into the AC-in port on the unit, and plug the other end into a USB interface of laptop.
3. Connect the WCM-110 with your PC or notebook via a LAN cable.

## 3. Access Point Management

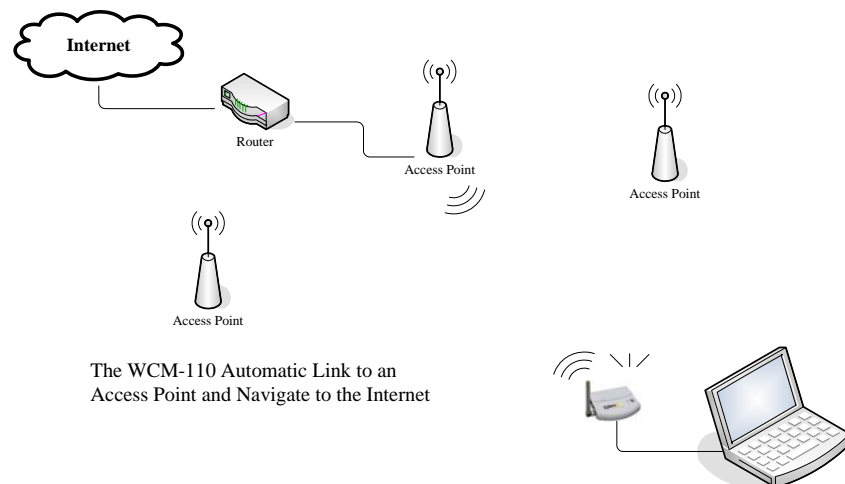

The WCM-110 provides web management interface for function configuration and management. The default IP address of WCM-110 is **192.168.0.10** with subnet mask **255.255.255.0**. To apply the interface, you need to configure your laptop/desktop IP address to be in the same IP segment as the device.

Make sure the WCM-110 is properly installed as the previous section.

### 3.1 Automatically Access to the Network

After the WCM-110 boot on, it automatically search an access point to access the network.

If there is an available access point in the network, the WCM-100 automatically gets an IP address from the DHCP and access the network.

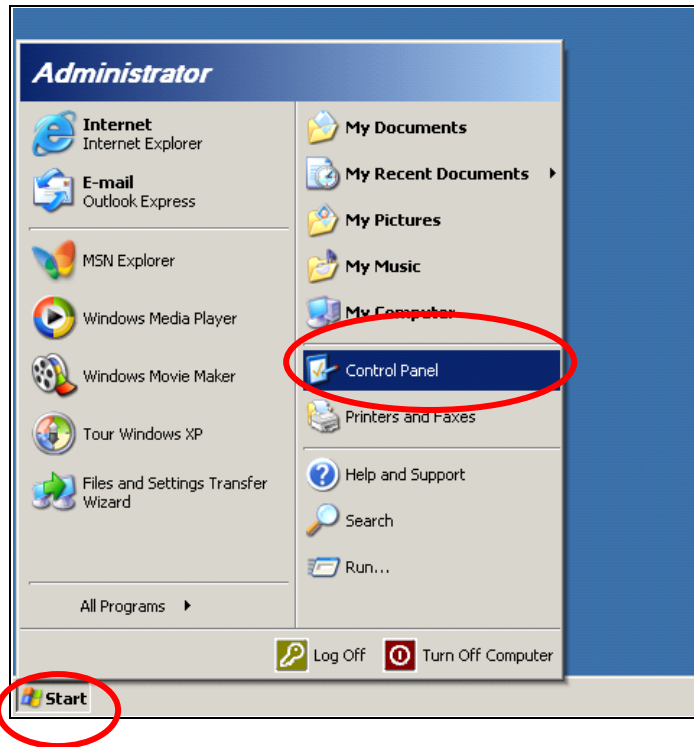

### 3.2 Manually Configure for Network Access

Most of time, the Access Point in the network hid the SSID or set a password to prevent illegal access. Please follow the steps for configuration:

Windows XP System:

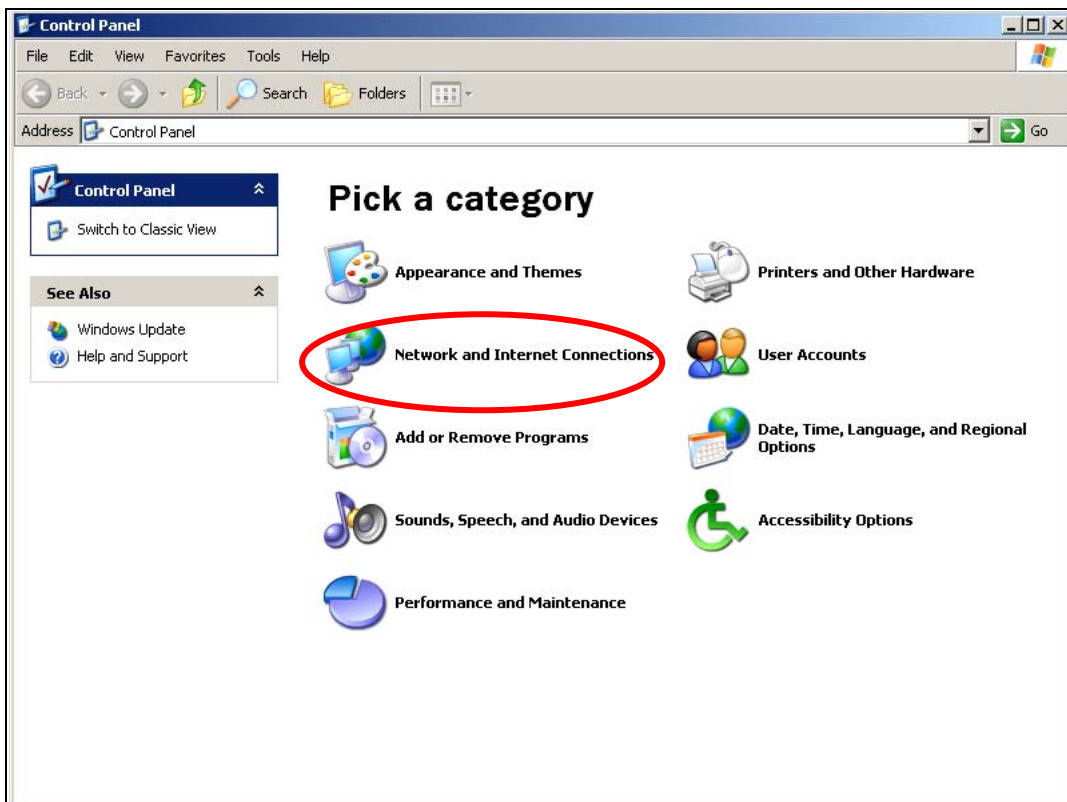

#### Step 1

Click **Start** → **Control Panel**

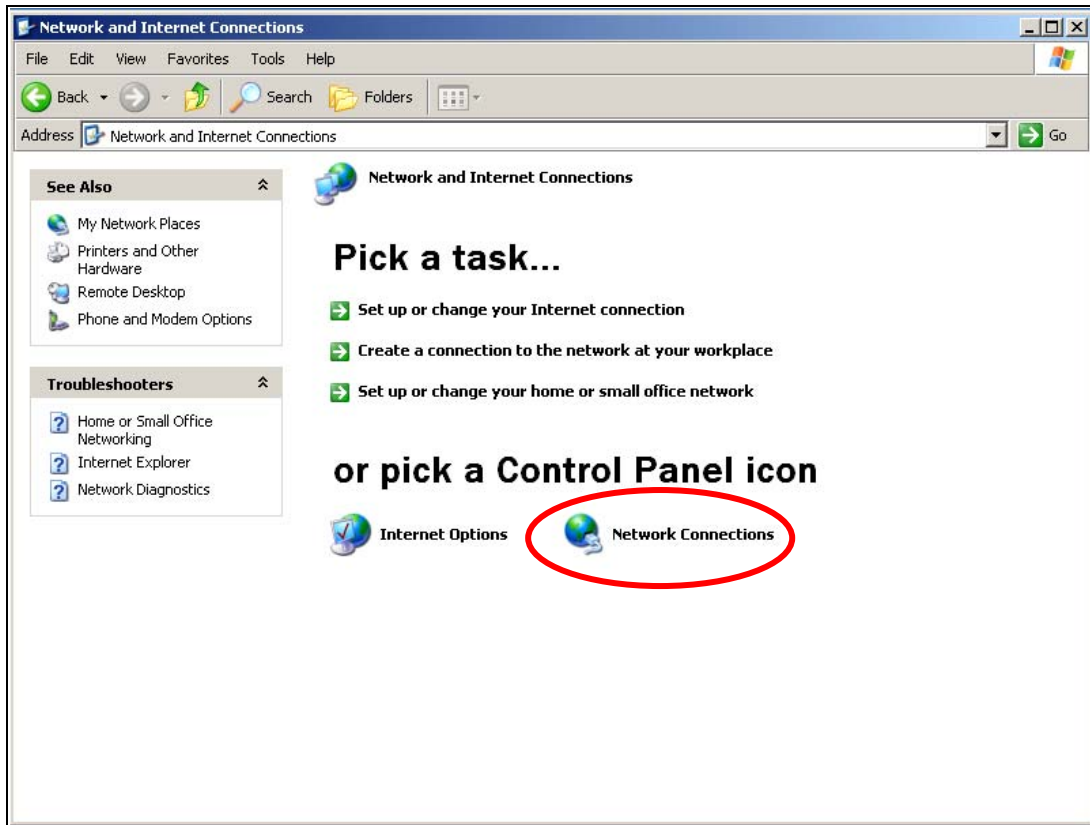

### Step 2

The **Control Panel** window shows up. Double-Click on the **Network and Internet Connections** icon:

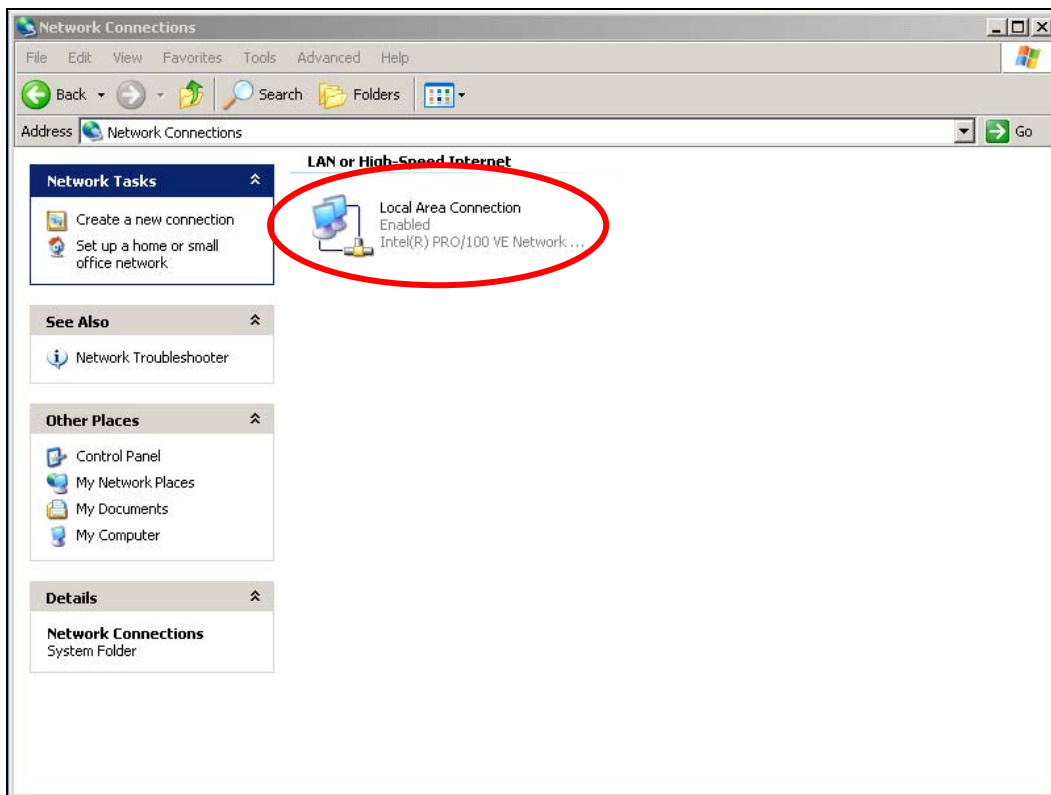

### Step 3

Click on the **Network Connections** icon in the following window.

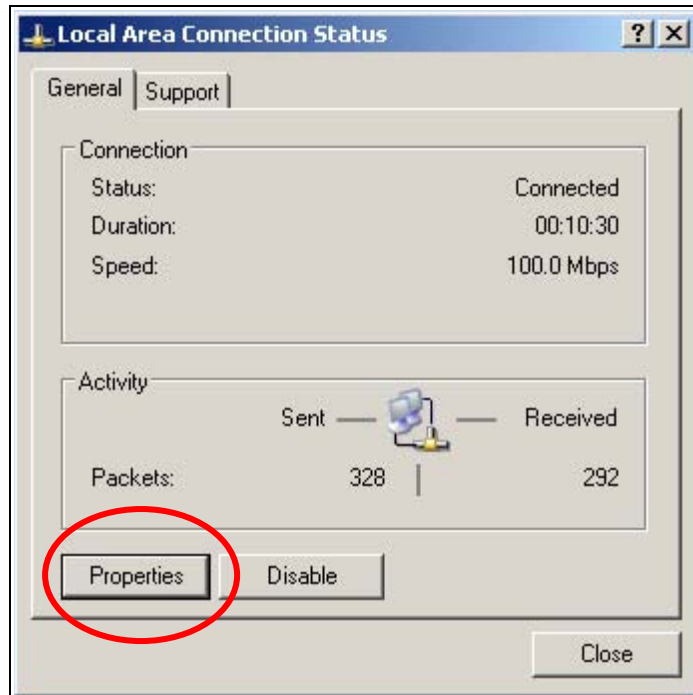

#### Step 4

Double-Click on the **Local Area Connection** icon in the following window.

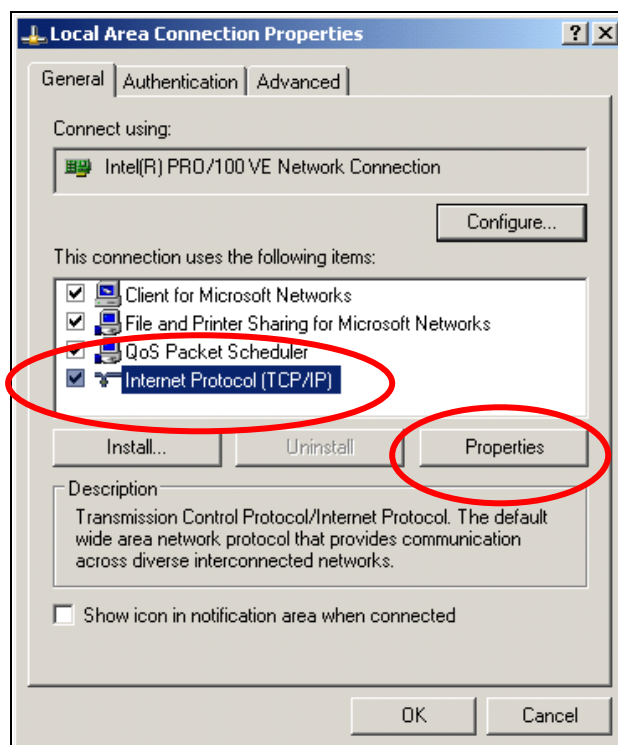

#### Step 5

The **Local Connection Status** menu shows up. Click on the **Property** button.

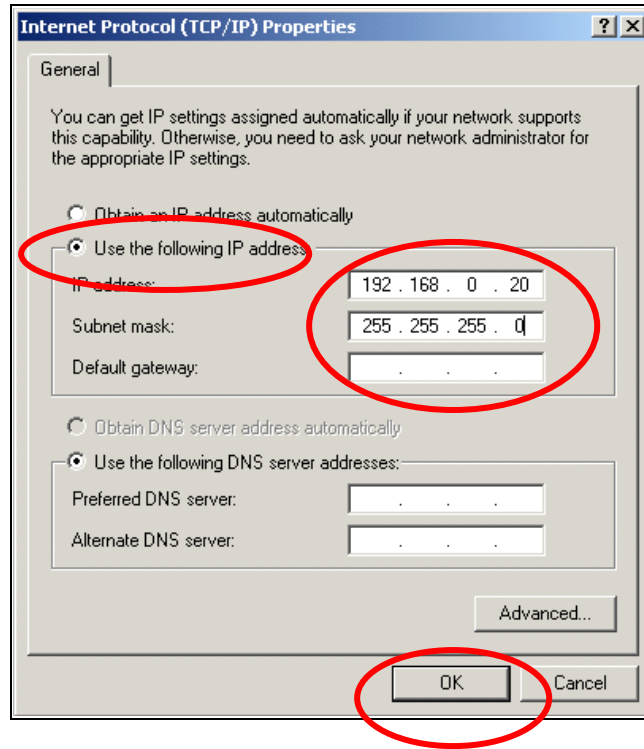

### Step 6

The **Local Area Connection Properties** menu shows up. Under the **General** Configuration Tab, locate and select **Internet Protocol (TCP/IP)** with the corresponding network card, then click **Properties** button.

### Step 7

The **Internet Protocol (TCP/IP) Properties** menu then shows up. Select **Use the following IP Address** and enter IP Address with **192.168.0.20** and **255.255.255.0** for the Subnet Mask, and then click **OK**.

## Step 8

Close all the Network configuration menus to save.

## 4. Web Configuration

### 4.1 Login to the Web Management Interface

Open your web browser, and type <http://192.168.0.10> in the address bar, and press Enter.

An authentication pop up window then appears. Enter **admin** in the username field and **admin** in the password field, and then click **OK**.

## 4.2 Radio Setting

After successfully login. The system brings the **Radio Setting** page for basic configuration. You can configure the Service Set ID (SSID) of the device. Select the operation mode of the wireless connection.

Please refer to the following page.

### Radio Setting

<a href="#">association table</a>	Service Set ID (SSID)	<input type="text" value="wlan-g"/>
<a href="#">radio</a>	<input checked="" type="checkbox"/> Response to Broadcast SSID requests	
<a href="#">security</a>	<hr/>	
<a href="#">ipconfig</a>	AP/UR/WB Mode	<input type="text" value="WB Mode"/>
<a href="#">filter</a>	RF Channel	<input type="text" value="Channel 11"/>
<a href="#">site survey</a>	Parent SSID	<input type="text" value="1590"/>
<a href="#">upgrade</a>	Use Preferred BSSID	<input type="text" value="Enabled"/>
	Parent BSSID	<input type="text" value="00:90:4C:60:04:00"/>
	<hr/>	
	<input type="button" value="Apply"/>	<input type="button" value="Reset"/> <input type="button" value="Cancel"/>

### 4.2.1 Service Set Identifier (SSID)

An SSID is usually referred to as a network name that identifies a wireless network. All access points and all devices attempting to connect to a specific WLAN must use the same SSID. A device will not be permitted to join the BSS unless it can provide the unique SSID.

The default SSID of WCM-110 is “**wlan-g**”. You can change the SSID of WCM-110 in the **Service Set Identifier (SSID)** field. You can also choose to show or hide the AP SSID in the wireless network by selecting or deselecting the **Response to Broadcast SSID requests**.

Service Set ID (SSID)	wlan-g
<input checked="" type="checkbox"/> Response to Broadcast SSID requests	

To change the SSID of WCM-110:

1. Enter new SSID in the **Service Set ID (SSID)** field.
2. If you do not want WCM-100 broadcast the SSID, anti-select the **Response to Broadcast SSID request** check button.
3. Click **Apply** button to save.

#### 4.2.2 AP/UR/WB Mode

The WCM-110 provides 3 modes for network infrastructure:

- **WB** mode – **Wireless Bridge** mode. Wireless Bridge is used for connecting two or more physically separated network segments.
- **AP** mode – **Access Point** mode. The device acts as a communication hub for users of a wireless device to connect to a wired LAN.
- **UR** mode – **Universal Repeater** mode. Device act as a access point and reply messages for the wireless client.

AP/UR/WB Mode	WB Mode
RF Channel	AP Mode
Parent SSID	UR Mode
Use Preferred BSSID	WB Mode
Parent BSSID	Enabled
	00:90:4C:60:04:00

##### 4.2.2.1 WB (Wireless Bridge) Mode

The default wireless mode is the **WB Mode**. Screen shows as following when WB Mode is selected.

AP/UR/WB Mode	WB Mode ▾
RF Channel	Auto ▾
Parent SSID	1590
Use Preferred BSSID	Enabled ▾
Parent BSSID	00:90:4B:63:45:7F

**Parent SSID:** The SSID of the access point which WCM-110 communicate to.

**Use Preferred BSSID:** Enabled/Disabled of using the MAC address of the parent access point.

**Parent BSSID:** The MAC address of the parent access point.

The **Parent SSID** and the **Parent BSSID** is automatically filled when use the **Site Survey** function and join to the parent access point. (See section **4.6 Site Survey**)

#### 4.2.2.2 AP (Access Point) Mode

Select **AP Mode** in the **AP/UR/WB Mode** field. Screen then changes to as the following:

AP/UR/WB Mode	AP Mode ▾
RF Channel	Auto ▾
Radio Preamble	Auto Select ▾
AP Mode	B only ▾
G Mode protection	CTS ONLY ▾
Rate Selection For B	Auto ▾
Rate Selection For G	Auto ▾
RTS Threshold (256-2432)	2347
Beacon Period (20-1000)	100
	milliseconds
DTIM Period (1-255)	1
<input type="button" value="Apply"/> <input type="button" value="Reset"/> <input type="button" value="Cancel"/>	

**RF Channel:** The WCM-110 provides 13 channels and automatically selects a non-overlapping channel for radio communication.

**Radio Preamble:** Allows to sets the preamble mode for a 2.4GHz/11Mb network.

**AP Mode:** To adjust the operation mode of WCM-110 using IEEE802.11b or IEEE802.11g standards.

Operation Mode	Supported wireless client(s)
B only	IEEE802.11b client(s) only
G only	IEEE802.11g client(s) only
BG mixed	IEEE802.11b and IEEE802.11g client(s)

**Rate Selection for B/G:** Specify the data transmission rate for IEEE802.11b/g devices. Data rate selections are

Wireless	Data Rate (Mbps)
IEEE802.11b	Auto, 1, 2, 5.5, 11
IEEE802.11g	Auto, 1, 2, 5.5, 6, 9, 11, 12, 18, 24, 36, 48, 54

#### 4.2.2.3 UR (Universal Repeater) Mode

Select **UR Mode** in the **AP/UR/WB Mode** field. Screen then changes to as the following:

AP/UR/WB Mode	UR Mode
RF Channel	Channel 1
Parent SSID	1590
Use Preferred BSSID	Enabled
Parent BSSID	00:90:4B:63:45:7F
<input type="button" value="Apply"/> <input type="button" value="Reset"/> <input type="button" value="Cancel"/>	

**Parent SSID:** The SSID of the access point which WCM-110 connect to.

**Use Preferred BSSID:** Enabled/Disabled of using the MAC address of the parent access point.

**Parent BSSID:** The MAC address of the parent access point.

The **Parent SSID** and the **Parent BSSID** is automatically filled when use the **Site Survey** function and join to the parent access point.

## 4.3 Association Table

The association table shows the link status of the device. This screen automatically refresh per 30 seconds.

Association Table								
association table	After 22 sec,Refresh page							
radio	Link Status: Connected							
security	Connected BSSID 00:90:4B:63:45:7F							
ipconfig	Number of Associated Stations: 1							
filter	No	MAC Address	Status	Mode	Rate	Signal Quality	RSSI	Power Save
site survey	1	00:11:50:F7:B3:37	Associated	b	11M	80	49	No
upgrade								

**Link Status:** Shows the link status of the WCM-110 to a parent access point.

**Connected BSSID:** Shows the MAC address of the connected parent access point.

**Number of Associated Stations:** Shows the numbers of wireless clients which connect to WCM-110.

**Note:** The associated stations table lists the devices which connect to WCM-110 only when WCM-110 is in AP or UR mode.

## 4.4 Security

The WCM-110 provides authentication methods to secure communication to and from wireless devices.

**Security**

association table	Security Mode	Disabled
radio		Disabled
security		WPA_Only
ipconfig		WPA_WPA2_Mixed
filter		WPA2_Only
site survey		WEP_Encryption
upgrade		

Apply   Reset   Cancel

### 4.4.1 Security Mode:

**Disable:** Disabled the secure connection.

**WPA\_Only: Wi-Fi Protected Access**, this provides data protection with the use of encryption and the use of access controls and user authentication.

**WPA\_WPA2\_Mixed:** A mixed type of WPA and WPA2.

**WPA2\_Only: Wi-Fi Protected Access 2**, the follow on security method to WPA for wireless networks that provides stronger data protection and network access control.

**WEP\_Encryption: Wired Equivalent Privacy**, a security protocol for wireless local area networks.

## 4.4.2 WPA\_Only Security

WPA is the first generation of advanced wireless security, providing enterprise and consumer Wi-Fi® users with a high level of assurance that only authorized users can access their wireless networks. WPA is based on a sub-set of the IEEE802.11i draft amendment to the 802.11 standard.

WPA is a powerful, standards-based, interoperable security technology for Wi-Fi networks. It provides strong data protection by using encryption as well as strong access controls and user authentication.

Security Mode	WPA_Only
WPA Cipher Suite	TKIP
WPA Pass Phrase or 64 HEX Key	*****
Authentication Method	Pre-Shared Keys
Group Rekey Time (sec)	86400
<input type="button" value="Apply"/> <input type="button" value="Reset"/> <input type="button" value="Cancel"/>	

**WPA Cipher Suit: AES or TKIP**

**WPA Pass Phase or 64 HEX Key:** Enter characters for encryption

**Authentication Method: Pre-Shared Keys or WPA-RADIUS**

**Group Rekey Time (sec):** Allows you to set time interval before the WPA group key is changed, a short re-key interval provides a more secure wireless network.

<b>Pre-Shared Keys</b>	Does not require an	Shared secret is used	Device-oriented
------------------------	---------------------	-----------------------	-----------------

	authentication server	for authentication	management of user credentials
<b>WPA-RADIUS</b>	Requires an authentication server	Uses RADIUS protocols for authentication and key distribution	Centralizes management of user credentials

### 4.4.3 WPA\_WPA2\_Mixed Security

WPA2 Mixed Mode is a Wi-Fi Alliance supported feature that permits the coexistence of WPA and WPA2 clients on a common SSID. This mode can be used during the transition from WPA to WPA2. In WPA2 Mixed Mode, the access points advertise which unicast encryption ciphers (TKIP or CCMP) are available for use and the client selects the one it would like to use. TKIP is always advertised as the broadcast/multicast traffic cipher because the goal of WPA2 Mixed Mode is to help transition older equipment. Therefore, the weakest broadcast/multicast cipher, TKIP, is advertised in a WPA2 Mixed Mode environment. With WPA2 Mixed Mode, once the client selects the cipher, that cipher is used to encrypt all unicast communications between the client and access point. This option provides enterprise-class security because it supports encryption with either TKIP or AES.

Security Mode	WPA_WPA2_Mixed ▾
WPA Cipher Suite	AES ▾
WPA Pass Phrase or 64 HEX Key	*****
WPA2 Cipher Suit	AES_Only ▾
WPA2 Pass Phrase or 64 HEX Key	*****
Authentication Method	Pre-Shared Keys ▾
Group Rekey Time (sec)	86400

Apply   Reset   Cancel

**WPA Cipher Suit: AES or TKIP**

**WPA Pass Phase or 64 HEX Key:** Enter characters for encryption

**WPA2 Cipher Suit:** Support **AES\_Only**

**WPA2 Pass Phase or 64 HEX Key:** Enter characters for encryption

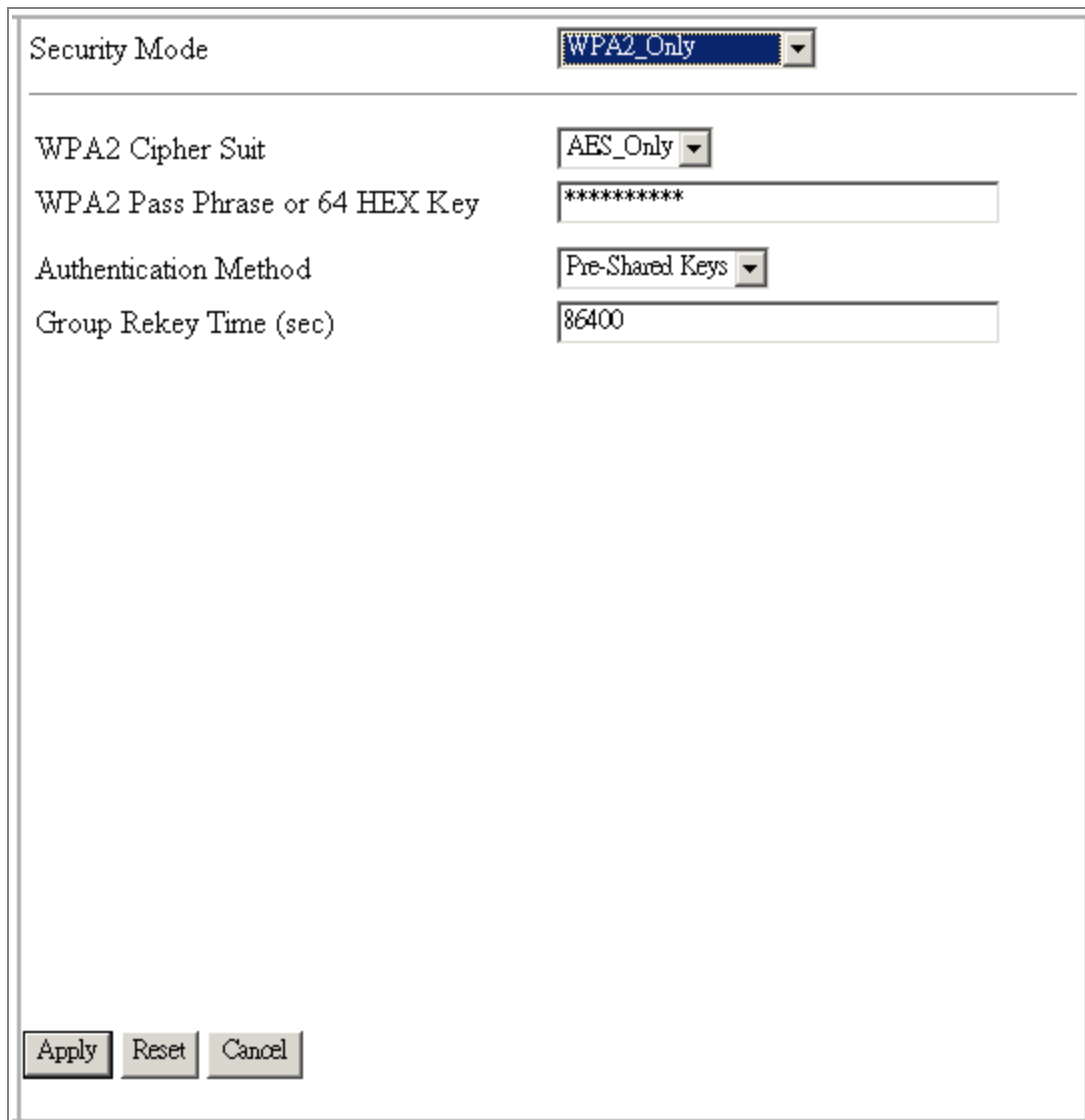

**Authentication Method: Pre-Shared Keys or WPA-RADIUS**

**Group Rekey Time (sec):** Allows you to set time interval before the WPA group key is changed, a short re-key interval provides a more secure wireless network.

<b>Pre-Shared Keys</b>	Does not require an authentication server	Shared secret is used for authentication	Device-oriented management of user credentials
<b>WPA-RADIUS</b>	Requires an authentication server	Uses RADIUS protocols for authentication and key distribution	Centralizes management of user credentials

#### 4.4.4 WPA2\_Only Security

WPA2 (Wi-Fi Protected Access 2) provides network administrators with a high level of assurance that only authorized users can access the network. Based on the ratified IEEE802.11i standard, WPA2 provides government grade security by implementing the National Institute of Standards and Technology (NIST) FIPS 140-2 compliant AES encryption algorithm.

The screenshot shows a configuration dialog box for WPA2 security. It contains the following fields and controls:

- Security Mode:** A dropdown menu set to "WPA2\_Only".
- WPA2 Cipher Suit:** A dropdown menu set to "AES\_Only".
- WPA2 Pass Phrase or 64 HEX Key:** A text input field containing "\*\*\*\*\*".
- Authentication Method:** A dropdown menu set to "Pre-Shared Keys".
- Group Rekey Time (sec):** A text input field containing "86400".

At the bottom of the dialog box, there are three buttons: "Apply", "Reset", and "Cancel".

**WPA Cipher Suit:** Support **AES\_Only**

**WPA Pass Phase or 64 HEX Key:** Enter characters for encryption

**Authentication Method:** **Pre-Shared Keys** or **WPA-RADIUS**

**Group Rekey Time (sec):** Allows you to set time interval before the WPA group key is changed, a short re-key interval provides a more secure wireless network.

<b>Pre-Shared Keys</b>	Does not require an authentication server	Shared secret is used for authentication	Device-oriented management of user credentials
------------------------	---	--	--

<b>WPA-RADIUS</b>	Requires an authentication server	Uses RADIUS protocols for authentication and key distribution	Centralizes management of user credentials
-------------------	-----------------------------------	---	--

### 4.4.5 WEP\_Encryption

WEP is part of the IEEE 802.11 standard ratified in September 1999. WEP uses the stream cipher RC4 for confidentiality and the CRC-32 checksum for integrity.

Security Mode WEP\_Encryption ▾

---

Authentication Type Open System ▾

Transmit WEP Key Key 1 ▾

WEP Key Size 40 bits ▾

---

WEP Key 1   HEX  ASCII

WEP Key 2   HEX  ASCII

WEP Key 3   HEX  ASCII

WEP Key 4   HEX  ASCII

(Enter 10 hexadecimal digits for 40 bit key, 26 hexadecimal digits for 104 bit key)

**Authentication Type:** Open System, Shared Key or Both.

**Transmit WEP Key:** Select using Key 1, Key 2, Key 3 or Key 4 for encryption.

**WEP Key Size:** No Set, 40 bits, or 128 bits.

**WEP Key 1~4:** Enter WEP Keys in hexadecimal or ASCII digit:

	Hexadecimal	ASCII
40 bits	10 digits	5 digits
104 bits	26 digits	13 digits

## 4.4.6 Configure the security on WCM-110

Situation to use security on WCM-110:

- When WCM-110 is in WB mode, and the access point which WCM-110 communicates to ask for a secure connection. The WCM-110 must use the same security setting as the parent access point.
- When WCM-110 is in AP mode, and asks a security connection for its wireless client. The wireless clients must use the same security setting as WCM-110.
- When WCM-110 is in UR mode, and the access point which WCM-110 communicates to ask for a secure connection. The WCM-110 must use the same security setting as the parent access point. The wireless clients of WCM-110 must use the same security setting.

To configure the security on WCM-110:

1. Select the security mode.
2. Select and filled the parameters on each mode.
3. Click **Apply** button to save.

## 4.5 Ipconfig

This function is to change the IP address of WCM-110.

IP Config	
association table	Use the following IP address:
radio	Ip Address <input type="text" value="192"/> <input type="text" value="168"/> <input type="text" value="0"/> <input type="text" value="10"/>
security	Subnet Mask <input type="text" value="255"/> <input type="text" value="255"/> <input type="text" value="255"/> <input type="text" value="0"/>
ipconfig	Gateway <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/> <input type="text" value="0"/>
filter	
site survey	
upgrade	<input type="button" value="Apply"/> <input type="button" value="Reset"/> <input type="button" value="Cancel"/>

To change the IP address of WCM-110, change the **IP Address**, **Subnet Mask** and **Gateway** filed. And then click **Apply** button to save.

## 4.6 Filter List

Filter List allowing filtering network traffic by controlling whether the specified MAC address forwarded or blocked by WCM-100.

**Filter List**

<ul style="list-style-type: none"> <li>association table</li> <li>radio</li> <li>security</li> <li>ipconfig</li> <li>filter</li> <li>site survey</li> <li style="color: blue;">upgrade</li> </ul>	Filter Mode <span style="float: right;">Block ▾</span> <span style="float: right; font-size: small;">Off Allow Block</span>	Stations not allowed to be associated. <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 5%;">No</th> <th style="width: 95%;">MAC Address</th> </tr> </thead> <tbody> <tr><td>1</td><td>00:A0:C5:5E:8E:9E</td></tr> <tr><td>2</td><td>00:13:46:9A:AB:DA</td></tr> <tr><td>3</td><td>00:0E:8E:B7:39:E6</td></tr> <tr><td>4</td><td>00:90:4B:33:95:20</td></tr> <tr><td>5</td><td>00:17:D1:FE:FF:01</td></tr> <tr><td>6</td><td>00:0E:8E:7B:D0:16</td></tr> <tr><td>7</td><td>00:00:00:00:00:00</td></tr> <tr><td>8</td><td>00:00:00:00:00:00</td></tr> <tr><td>9</td><td>00:00:00:00:00:00</td></tr> <tr><td>10</td><td>00:00:00:00:00:00</td></tr> <tr><td>11</td><td>00:00:00:00:00:00</td></tr> <tr><td>12</td><td>00:00:00:00:00:00</td></tr> <tr><td>13</td><td>00:00:00:00:00:00</td></tr> <tr><td>14</td><td>00:00:00:00:00:00</td></tr> <tr><td>15</td><td>00:00:00:00:00:00</td></tr> <tr><td>16</td><td>00:00:00:00:00:00</td></tr> <tr><td>17</td><td>00:00:00:00:00:00</td></tr> <tr><td>18</td><td>00:00:00:00:00:00</td></tr> <tr><td>19</td><td>00:00:00:00:00:00</td></tr> <tr><td>20</td><td>00:00:00:00:00:00</td></tr> <tr><td>21</td><td>00:00:00:00:00:00</td></tr> <tr><td>22</td><td>00:00:00:00:00:00</td></tr> <tr><td>23</td><td>00:00:00:00:00:00</td></tr> <tr><td>24</td><td>00:00:00:00:00:00</td></tr> <tr><td>25</td><td>00:00:00:00:00:00</td></tr> <tr><td>26</td><td>00:00:00:00:00:00</td></tr> <tr><td>27</td><td>00:00:00:00:00:00</td></tr> <tr><td>28</td><td>00:00:00:00:00:00</td></tr> <tr><td>29</td><td>00:00:00:00:00:00</td></tr> <tr><td>30</td><td>00:00:00:00:00:00</td></tr> <tr><td>31</td><td>00:00:00:00:00:00</td></tr> <tr><td>32</td><td>00:00:00:00:00:00</td></tr> </tbody> </table>	No	MAC Address	1	00:A0:C5:5E:8E:9E	2	00:13:46:9A:AB:DA	3	00:0E:8E:B7:39:E6	4	00:90:4B:33:95:20	5	00:17:D1:FE:FF:01	6	00:0E:8E:7B:D0:16	7	00:00:00:00:00:00	8	00:00:00:00:00:00	9	00:00:00:00:00:00	10	00:00:00:00:00:00	11	00:00:00:00:00:00	12	00:00:00:00:00:00	13	00:00:00:00:00:00	14	00:00:00:00:00:00	15	00:00:00:00:00:00	16	00:00:00:00:00:00	17	00:00:00:00:00:00	18	00:00:00:00:00:00	19	00:00:00:00:00:00	20	00:00:00:00:00:00	21	00:00:00:00:00:00	22	00:00:00:00:00:00	23	00:00:00:00:00:00	24	00:00:00:00:00:00	25	00:00:00:00:00:00	26	00:00:00:00:00:00	27	00:00:00:00:00:00	28	00:00:00:00:00:00	29	00:00:00:00:00:00	30	00:00:00:00:00:00	31	00:00:00:00:00:00	32	00:00:00:00:00:00

**Filter Mode:** Allow or Block devices pass through WCM-110 by the MAC address of the devices.

Off	Allow	Block
Disable filtering	Allow devices pass through	Block devices pass through

function	WCM-110 with MAC in the list.	WCM-110 with MAC in the list
----------	-------------------------------	------------------------------

**Stations not allowed being associated:** Manually filled the MAC address in the list for the filter function.

To filter devices, select **Filter Mode**, fill the MAC address in the list, and click **Apply** button to save

## 4.7 Site Survey

Site Survey scans the available wireless devices around the network and lists the information it surveyed. You can manually choose a wireless access point to connect to.

Site Survey								
association table		SSID	BSSID	Channel	AP	Mode	Security	Strength
radio	<input checked="" type="radio"/>	1590	00:0e:8e:7a:d4:94	1	Yes	G	WEP	4
security	<input type="radio"/>	optech	00:90:4b:33:95:20	1	Yes	B	WEP	2
ipconfig	<input type="radio"/>	ipcam	00:0e:8e:b7:39:e6	10	Yes	G	WEP	24
filter								
site survey	<input type="button" value="Scan"/>	<input type="button" value="Join"/>	<input type="button" value="Reset"/>					
upgrade								

**Scan** button: Scan the available wireless devices again.

**Join** button: Communicate to the selected wireless device.

**Reset** button: Re-Select the wireless device.

To use site survey:

- 1: Check the list for the access point. Click the **Scan** button to re-scan if needed.
2. Click the radio button which you want to communicate to.
3. Click the **Join** button.
4. Check the **Parent SSID** field in the **Radio Setting** menu if the AP is correctly joined.

## 4.8 Firmware Upgrade

This interface allows upgrading firmware and changing password. Current firmware version also shows in this interface.

Firmware Upgrade	
association table	Firmware to Upgrade :
radio	Select file: <input type="text"/> <input type="button" value="瀏覽..."/>
security	<input type="button" value="Upgrade"/> <input type="button" value="Cancel"/>
ipconfig	
filter	Change Password :
site survey	New Password : <input type="text"/>
upgrade	Reconfirm Password : <input type="text"/>
	<input type="button" value="Apply"/> <input type="button" value="Cancel"/>

Current Firmware Version: v1.04.01

### 4.8.1 Firmware Upgrade:

To upgrade firmware:

1. Prepare the new firmware in your PC.
2. Click the **browse** button and select the firmware stored in your PC.
3. Click the **Upgrade** button to process upgrade.

**Note:** Do not interrupt the upgrade process until it success.

### 4.8.2 Change Password:

To change password:

1. Filled the **New Password** field.
2. Filled the **Reconfirm Password** field.
3. Click **Apply** button to save.

### 4.8.3 Current Firmware Version:

This information shows the current firmware version of WCM-110.

# 5. Local Network Connection

## 5.1 Wireless Bridge Mode

Refer to the following image for advanced network application of WB (Wireless Bridge) mode. The WCM-110 acts as a wireless client of the access point. Personal computers can access to the Local Area Network and hence to the Internet by way of WCM-110.

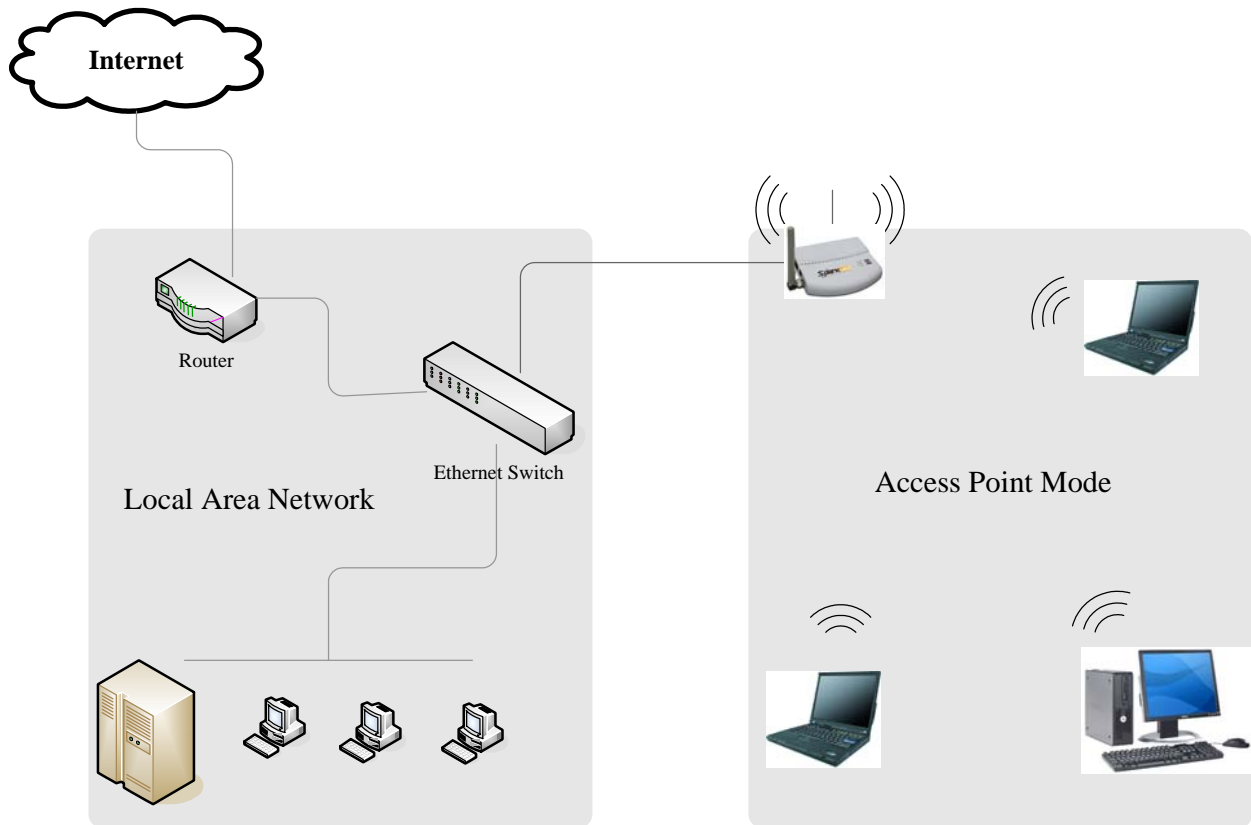

The wireless server is disabled in this mode.

Note that you need to set up the security for the access point if needed.

## 5.2 Access Point Mode

Refer to the following image for advanced network application of AP (Access Point) mode. The WCM-110 links to the Ethernet switch in the local area network and acts as a wireless server for the personal client. Wireless clients of WCM-110 can access to the Local Area Network and hence to the Internet by way of WCM-110.

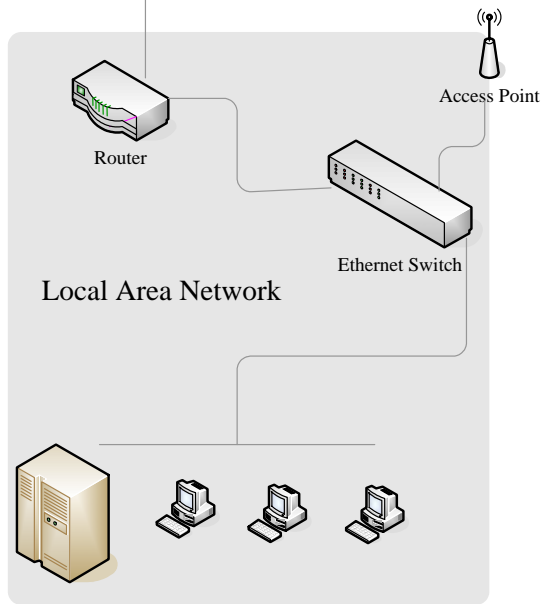

### 5.3 Repeater Mode

Refer to the following image for advanced network application of UR (Universal Repeater) mode. The WCM-110 acts as a wireless client of the access point and act as a wireless server at the same time. Wireless clients of WCM-110 can access to the Local Area Network and hence to the Internet by way of WCM-110.

Note if the security is configured on the access point, the WCM-110 ask the same security connection for its wireless client.

Internet

# 6. Specification

<b>Hardware Features</b>	
Wired Interface	10/100Base-T Ethernet Port
Wireless Interface	2dBi detachable RSMA Antenna
LED Indicator	Act, Power, Link
<b>Radio Characteristics</b>	
Standard	IEEE 802.11b/g
Frequency Bands	802.11b/g : ISM-Band 2.412~ 2.484GHz
Receive Sensitivity	802.11g : 54 Mbps $10^{-5}$ BER @ -75dBm 802.11b : 11 Mbps $10^{-5}$ BER @ -89dBm
Modulation	802.11g: OFDM 802.11b: CCK,DQPSK, DBPSK
Data Rates	802.11g: 54, 48, 36, 24, 18, 12, 9, 6 Mbps 802.11b: 11, 5.5, 2, 1Mbps
Transmit Power	802.11b: 17dBm 802.11g: 14dBm
<b>Environmental</b>	
Power Supply	DC 5V, 1A
Temperature	0 to 70 Degree C
Humidity	95% Non-condensing
Dimension (W x D x H)	102 x 71 x 20 mm
Weight	70g
<b>Software Features</b>	
Management	Web-Based Management Firmware Upgrade via HTTP
Security	64/128-bit WEP, WPA, WPA2
<b>Certification</b>	
FCC, CE	
<b>Warranty</b>	
1 Year
